

Teaching physics but not from
a physical science background?

Want to use your classroom
skills in a new context?

Physics

Teacher Subject Specialism Training Poole

Looking for new career opportunities or returning to teaching?

The best physics teachers inspire their students with a passion for the subject. They are confident, knowledgeable and able to provide students with engaging practical experiences.

We know that you are a busy, committed professional.

We believe that, with our flexible training programme, including personalised support and study to fit around your commitments,

you can become an excellent physics teacher.

Teacher Subject Specialism Training (TSST), provided by Poole TSST in partnership with Sigma Teaching School and Bath Spa University, provides a solution to the ongoing issues in teacher recruitment and retention for Physics, by training non-specialist teachers in subject-specific pedagogy and subject knowledge. We are committed to providing high quality, sustainable training; delivering flexible and bespoke programmes to suit the needs of our participants.

Is the course for you?

We would like to hear from:

- Practising non-specialist physics teachers who would like to enhance their knowledge of physics (e.g. ITT in Biology or Chemistry).
- Teachers whose initial teacher training was not at secondary level or in science.
- Teachers returning after a career break.

For teachers meeting the criteria, the Physics TSST course is **free**^{*} through funding provided by the Department for Education (DfE).

^{*} for teachers in the state sector.

Course Details:

- Self-study supported by online tutorials for typical KS3 and GCSE topics.
- 'Do try this at home' practical work, tailored to the equipment available in your school.
- Coaching and support from practising physics teachers.
- Workshop Day x 2.
